

# Secura CyberCare

RAISING YOUR CYBER RESILIENCE

A cybersecurity partner: that's what a lot of our customers need and ask for. An independent advisor you can count on at any time. Someone who can help you plan smart security solutions, so that you can protect your organization and assets. Secura CyberCare means you always have a trusted security partner at hand, for all your cybersecurity questions.

## Challenging job

Cybersecurity is a challenging job. Your ambition is to make your organization as digitally secure as possible. But the rapid developments mean your work now involves everything from automatic detection capabilities to awareness. Before you realize, you've spent another year mainly solving pressing issues. If a problem isn't urgent, it might not be tackled.

## Complex field

If left for too long, these problems can lead to serious security issues. Secura has over twenty years of experience in cybersecurity. We often see CISOs and managers involved in digital security struggling with the increasing complexity of the field. You react to what is happening but may experience a lack of control.

## Trusted partner

What you need is an independent, trusted partner. An expert you can call any time, who shares the responsibility of your digital security. Someone who can help you make a plan to improve the cyber resilience of your organization. To give you, your customers and your stakeholders peace of mind.

## Working together on cyber resilience

Secura CyberCare is a full-service security solution. At the start of the year, our experts consult with you to draw up a clear roadmap. It details the security measures and actions your organization needs in the coming year. We then plan the necessary tests and checks together. Most importantly: throughout the year we actively work together to improve the digital security of your organization.

# How Secura CyberCare works

Secura CyberCare assesses your needs, advises on measures and addresses any issues, at a fixed price per month.

## ASSESS

What is the state of the security of your organization? Which security measures do you need? Every year we conduct a **Security Maturity Assessment**. In consultation with you we draw up a **clear roadmap**. We use our **Vulnerability Assessment & Pentesting Services** to identify vulnerabilities in your security. We also continuously monitor your **external attack surface** for vulnerabilities.

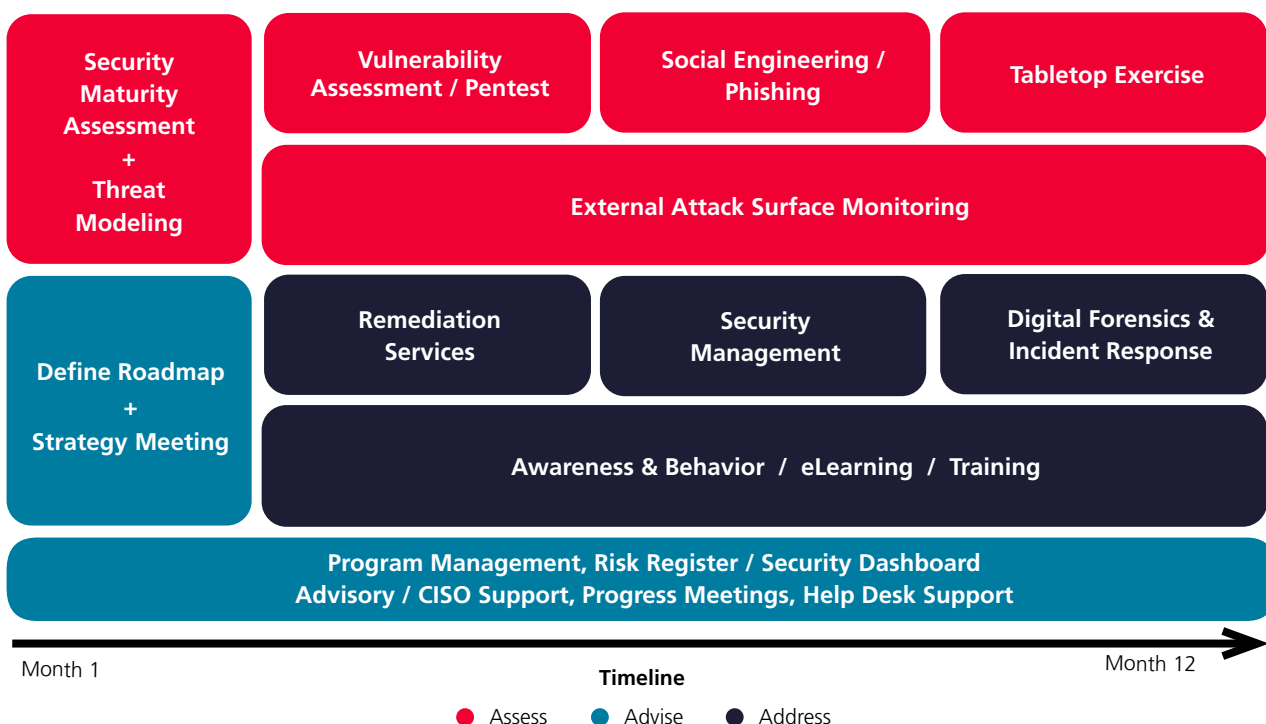

## ADVISE

Secura gives you independent security advice – ranging from policy to practical matters. This includes: an **annual Strategy Meeting** to determine direction and priorities. Secura CyberCare provides **one trusted advisor** –

someone you can call any time. We can also arrange for your contact person to be on location 1 or 2 days a month to discuss current affairs and the best course of action.

## ADDRESS

How do you increase the security awareness of your employees? Which measures are needed to remediate new findings? We do not only assess the situation, but we also help you address any issues, for example with **Security Management Services** (such as implementing ISO 27001 controls), **Awareness & Behavior Services** and **Digital Forensics and Incident Response** - both proactive and reactive.
